This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

</table>
2 (a) (i) Point on the Earth’s surface above the focus [1]

(b) (i) Line passing between the 7s and 8s north of Yokohama
Line passing between the 7 and the 9 near Iwate and Furukawa [2]

(ii) High intensity close to epicentre/highest 300km from epicentre/lower further away from epicentre
Higher in E/NE/lower in W/SW
Intensities from 9 to 4 (wherever stated)
Concentric zones
Sendai an anomaly [2]

(c) (i) Close to epicentre/high(est) intensity/intensity 8
Affected by tsunami
Has a large population [2]

(ii) Far from epicentre/named distance from epicentre
In sheltered bays/protected by land/did not face tsunami [1]

3 (a) Relief
Flat/gentle slopes/plain (lower areas),
Small hills/small mounds/isolated hills/knolls/kopje,
Plateau/ridge/flat top,
Steep slopes/cliffs,
Boulders/large rocks,
(Dry) river bed/valley,
Inselberg/mesa

Vegetation
Sparse/little/scattered/bare ground/widely spaced/in patches (referring to vegetation generally and not just to trees, bushes or grass)
Trees
In leaf/some not in leaf
Bushes/scrub/shrubs
Brown/yellow/dry/dead/tussocks of grass

Maximum four marks for each – No transfer of marks between sections. [6]

(b) Shallow/widely branching root to catch rain/use rain before it evaporates
Plants widely spaced so less competition for moisture
Long/deep/tap roots to reach water
Small leaves/no leaves/thorns/spines to reduce transpiration/water loss/evaporation
Thick cuticle/few stomata/no stomata/waxy/glossy/hairy leaves to reduce transpiration/water Loss/evaporation
Succulents/bulbous trunks/roots to store water
Short life cycle/long dormant periods/seeds lie dormant until rains/intermittent rain
Low plants avoid wind and reduce transpiration/water loss

Description and explanation needed in each case. [2]
4 (a) **Landform X**
Beach  
Sand,  
Gentle slope/slopes down to sea/fairly flat/quite flat  
Low tide  

**Landform Y**  
Cliff  
Layers of rock/sedimentary rock  
Different colours/two named colours/two rock types  
A little/patches of vegetation (on cliff),  
Bare rock  

Maximum 3 marks for each [5]

(b) **Wave action**  
Abrasion/corrosion/hydraulic action, (or description of process)  
Undercutting/notches formed/caves formed/erosion of base,  
Collapse/landslide,  
Retreat,  
Repeated action, [3]

5 (a) (i) **Total population more young/more children**  
**Total population fewer middle age/working age**  
**Total population more old**  
**Total population has largest/modal group at about 40 years but foreigners have largest/modal group at about 30 years, (not majority)**  
**Total population has more dependents**  
**Total population has more even age groups**

*Or emphasis on foreign born population*

Differences needed.  
Various age ranges are permissible and allow references to a single age group.  
Don't insist on percentages.  
Don't allow descriptions of the shape of the pyramid. [2]

(ii) **Allow a variety of expressions for the following:**  
Children too young to travel  
Migrant workers  
Many migrants are single and don't have children  
Old retire and go home/too old to travel [1]

(b) (i) **Increase** [1]

(ii) **Immigration exceeds emigration/698 thousand immigrants and 450 thousand emigrants**  
**Immigration growing faster than emigration, = 1**  
**Causing total population to increase, = 1** [2]
Net migration/immigration – emigration is different from the population increase/does not account for the population increase.

Example of a correct pair of calculated figures, (allow without the thousands) birth rate/death rate affect total/natural increase also occurs.

(b) Coal deposits are close to the border with China, (allow “China is just over the border”) therefore reduced transport costs/easier transport, China has large/larger/largest population, (not just the figure) therefore high demand, (allow various expressions such as “will buy more”)

(c) Advantages
Financial resources great(er)/profits/investment/money/improved economy, able to develop roads/schools/hospitals/services/infrastructure/produce electricity

Disadvantages
Damage to grazing/grass lands of wild animals/destruction of habitats/loss of wilderness/loss of cold desert
Roads/power grids affect migrating animals/birds
Mines consume water used by people, (connection clear)
Effect of dust on people e.g. health, (connection clear)
Visual pollution of open cast mines
Environmental damage affects tourism

Maximum 3 marks on either
