READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces provided.
Write in dark blue or black pen.
You may use an HB pencil for any diagrams or graphs.
Do not use staples, paper clips, glue or correction fluid.
DO NOT WRITE IN ANY BARCODES.

Write your answer to each question in the space provided.
If additional space is required, you should use the lined pages at the end of this booklet. The question number(s) must be clearly shown.

Answer all questions.

The Insert contains Figs. 1.1 and 1.6 and Table 1.1 for Question 1, and Figs. 2.1, 2.4 and 2.8 and Tables 2.2 and 2.3 for Question 2.

The Insert is not required by the Examiner.
Sketch maps and diagrams should be drawn whenever they serve to illustrate an answer.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.
Students at a college in southern England were studying how to collect weather data and if there might be relationships between weather data measurements. One group of students focused their study on rainfall. They investigated the following hypotheses:

**Hypothesis 1:** Daily rainfall totals are influenced by the direction from which the wind is blowing.

**Hypothesis 2:** Daily rainfall totals are higher when atmospheric pressure is higher.

(a) The students decided to collect their data at 09:00 on each day in February.

Why is it important to collect data at the same time each day?

...............................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
.............................................................................................................................................[1]

(b) The students used a rain gauge and measuring cylinder to collect rainfall data. These are shown in Fig. 1.1 (Insert).

(i) Describe how this equipment is used to measure daily rainfall.

...............................................................................................................................................
................................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
...............................................................................................................................................
.............................................................................................................................................[4]

(ii) Which two of the following factors are important when deciding where to put the rain gauge? Tick (✓) your choices below.

<table>
<thead>
<tr>
<th>Factor</th>
<th>Tick (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>away from trees to reduce interception by leaves</td>
<td></td>
</tr>
<tr>
<td>on concrete to collect any rain splashing up from the ground</td>
<td></td>
</tr>
<tr>
<td>on a hillside which is facing the direction the wind is blowing the rain</td>
<td></td>
</tr>
<tr>
<td>next to a main road so it is easy to get to the rain gauge</td>
<td></td>
</tr>
<tr>
<td>remote from people or animals which may interfere with the rain gauge</td>
<td></td>
</tr>
</tbody>
</table>
(c) The students used a wind vane to collect data about wind direction.

(i) On Fig. 1.2 below, **complete the boxes** to show how the wind vane measures wind direction. [2]

![Fig. 1.2](image)

(ii) Suggest a good position to put a wind vane and explain your choice.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [2]

(d) The students used their daily measurements of rainfall and wind direction to plot data onto Fig. 1.3 on page 4.

(i) On Fig. 1.3 **plot the rainfall measurements** for 4th and 27th February shown below.

<table>
<thead>
<tr>
<th>Date in February</th>
<th>Wind direction</th>
<th>Total rainfall (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>4th</td>
<td>south</td>
<td>7.0</td>
</tr>
</tbody>
</table>
| 27th             | north          | 4.4                 | [2]
Results of students’ measurements of wind direction and total daily rainfall from the current year.

Fig. 1.3
(ii) What conclusion would the students make about Hypothesis 1: *Daily rainfall totals are influenced by the direction from which the wind is blowing*? Support your answer with evidence from Fig. 1.3.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................[4]
The students compared their results with data collected in February of the previous year. This is shown in Fig. 1.4 below.

**Wind direction and total daily rainfall data from previous year**

![Wind direction and total daily rainfall data](image)

**Key**

- [ ] daily rainfall (bar graphs)
- [ ] wind direction (rose diagram)

**Fig. 1.4**
(iii) Describe how wind direction in February varied between the two years shown in Figs. 1.3 and 1.4. Use data in your answer.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................[2]

(iv) What effect did the difference in wind direction have on daily amounts of rainfall in February in the two years?

...........................................................................................................................................
...........................................................................................................................................[1]
To investigate **Hypothesis 2**: *Daily rainfall totals are higher when atmospheric pressure is higher*, the students recorded atmospheric pressure daily.

(i) Which **one** of the following instruments would the students have used to measure atmospheric pressure? Tick (✓) your choice below.

<table>
<thead>
<tr>
<th>Weather instrument</th>
<th>Tick (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>anemometer</td>
<td></td>
</tr>
<tr>
<td>barometer</td>
<td></td>
</tr>
<tr>
<td>hygrometer</td>
<td></td>
</tr>
<tr>
<td>thermometer</td>
<td></td>
</tr>
</tbody>
</table>

(ii) The students plotted their measurements of atmospheric pressure and daily rainfall on the scatter graph, Fig. 1.5 below.

**Plot the data** for the two days in the table below onto Fig. 1.5.

<table>
<thead>
<tr>
<th>Date in February</th>
<th>Atmospheric pressure (mb)</th>
<th>Total rainfall (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>11th</td>
<td>987</td>
<td>10.0</td>
</tr>
<tr>
<td>24th</td>
<td>997</td>
<td>3.1</td>
</tr>
</tbody>
</table>

**Atmospheric pressure and daily rainfall totals**

![Scatter plot of atmospheric pressure and daily rainfall totals](image)

**Fig. 1.5**
(iii) The students made the conclusion that **Hypothesis 2: Daily rainfall totals are higher when atmospheric pressure is higher** is incorrect. How does Fig. 1.5 support this conclusion? Refer to data in your answer.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...............................................................................................................................................[2]

(iv) The students again compared their results with data collected in February of the previous year. Atmospheric pressure data for both months is shown in Table 1.1 (Insert). Describe the differences in atmospheric pressure between the two months. Use data in your answer.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...............................................................................................................................................[2]

(f) Another group of students compared data they had collected on average daily temperatures and wind direction. This is shown in Fig. 1.6 (Insert). Describe how the direction from which the wind was blowing affected average daily temperatures.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................[3]

[Total: 30]
Students in Thailand did fieldwork to investigate the effects of urban sprawl taking place around their school.

(a) What is meant by urban sprawl?

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................

One group of students measured variations in water pollution in local lakes, and did an environmental quality survey in areas near the school. They concentrated their investigation on the following hypotheses:

**Hypothesis 1:** Lakes are more polluted in areas where housing has been there longer.

**Hypothesis 2:** The overall quality of the environment is better in the older housing area.

The students selected three sites in different areas around their school to do their fieldwork. They are described in Table 2.1 below.

<table>
<thead>
<tr>
<th>Site</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site 1</td>
<td>an area of older, more expensive housing on a secure estate</td>
</tr>
<tr>
<td>Site 2</td>
<td>an area of modern, cheaper housing alongside a main road</td>
</tr>
<tr>
<td>Site 3</td>
<td>an area where new housing was being completed</td>
</tr>
</tbody>
</table>

(b) To investigate **Hypothesis 1** the students did two tests to measure the pH value and clarity of the water. These two tests are described in Fig. 2.1 (Insert), which is taken from a student’s fieldwork notebook.

Suggest why the method to measure pH may be more reliable than the method to measure clarity.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................[2]
(c) The results of the tests are shown in Tables 2.2 and 2.3 (Insert).

(i) Plot the average pH value of the water at site 2 on Fig. 2.2 below. [1]

Average pH values of water at the three sites

![Chart showing pH values for sites 1, 2, and 3: site 1: older housing, site 2: modern housing, site 3: new housing being completed.]

(ii) Plot the average depth of clear water at site 2 on Fig. 2.3 below. [1]

Average depth of clear water at the three sites

![Chart showing depth values for sites 1, 2, and 3: site 1: older housing, site 2: modern housing, site 3: new housing being completed.]

Fig. 2.2

Fig. 2.3
(iii) What conclusion would the students make about Hypothesis 1: Lakes are more polluted in areas where housing has been there longer? Circle your decision below and support it with evidence from Figs. 2.2 and 2.3 and Tables 2.2 and 2.3.

Hypothesis is true  Hypothesis is partly true  Hypothesis is false
