UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

Specimen for 2006

GCE O LEVEL

MARK SCHEME

MAXIMUM MARK: 75

SYLLABUS/COMPONENT: 7094

BANGLADESH STUDIES Environment and Development of Bangladesh PAPER 2

Page 2	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – 2006	7094	2

This specimen marking scheme is neither exhaustive nor prescriptive. It is an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners award marks. It only provides notes and does not give detailed sample answers. It does not indicate the details of the discussions that take place at an Examiners' meeting before marking begins; it would be amended at this meeting prior to marking the candidates' scripts.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

- 1 (a) (i) W delta
 - X oxbow lake Y – meander Z – braiding/island

[4]

(ii) Delta –

deposition heavy load carried by river river's speed checked as it enters the sea no currents/strong tides to remove deposition salt water causes fine mud to coagulate deposition along tributaries distributaries advances seaward

Ox-bow lake -

erosion on outer/concave bank deposition on inner bank pronounced meander neck narrows river breaks through in times of flood river flows straight ends of former meander silt up

Meander –

concave/outer bank	 faster flow
	 more volume
	- erosion/undercutting
convex/inner bend	- slow flow
	 shallow/friction
	 deposition

Braiding –

deposition in channel shallow water/friction no longer able to transport load channel choked splits into smaller channels then rejoins creates islands

Credit labels on diagrams if drawn

5 at 1 mark [5]

	Page 3			Mark Scheme Syllabus		Paper
				GCE O LEVEL – 2006	7094	2
	(b)	(i)		– carp, shrimp, etc. – catfish, bream, mackerel, etc.		[2]
		(ii)	flood co disrupto land re irrigatic chemic	wetlands ontrol measures ed flow of rivers and dried up water bodies clamation on schemes cals used in farming mangroves		
			disease	e		
		(iii)	aquacu	levelopment Ilture in derelict pond, canals, etc.	5 at 1 mark	[5]
			improve genetic rotation e.g. shi	pment of nutritious fish food ed breeding techniques cally engineered species n with agriculture rimp and rice depending on water salinity levelopment		
					5 at 1 mark	[5]
		(iv)	e.g. new sp expens	any sensible comment either in favour of the measure or pecies threaten indigenous ones se of aquaculture levelopment	against it 4 at 1 mark	[4]
					TOTAL 25 MA	KK5
2	(a)	(i)	greenh to keep trappeo	sing temperatures ouse gases acting as blanket o in infra-red radiation d heat ed diagram necessary for full marks	4 at 1 mark	[4]
		(ii)	exhaus burning defores	sed carbon dioxide in atmosphere at fumes from road transport g fossil fuels station and burning ne from animal manure and farms	4 at 1 mark	[4]
		(iii)	submer souther increas leading	ea levels caused by melting ice-caps rge low-lying areas rn Bangladesh at risk se in cyclones because of increased sea temperatures to more flooding and disease – malaria, cholera Sundarbans		
					4 at 1 mark	[4]

Page 4		e 4 Mark Scher GCE O LEVEL		Paper 2
	(iv)	Allow reasoned comments on the fact the Accept possible solutions to increased flo Allow development	•	
			4 at 1 mark	[4]
(b)	(i)	develop over warm oceans – surface tem air over sea heated expands	perature over 27° C	
		warm moist air rises quickly condenses to form clouds and rain		
		air rushes in a spiral manner to replace ri	sing air 5 at 1 mark	[5]
	(ii)	ocean surface raised – a giant wave death and injury destroys crops, trees, fish farms		
		contaminates drinking water destroy buildings		
		carry boats inland	4 at 1 mark	[4]
			TOTAL 25 MA	DVC
	<i>(</i> 1)		TOTAL 25 MA	KK2
(a)	(i)	Primary – concerned with using natural re	esources. Plus example	
	(ii)	Secondary – process and manufacture process and manufa	rimary products. Plus example	
	(iii)		e. ach – 1 for definition, 1 for example.	[6]
(b)	(i)	Decrease in primary Increase in secondary		
		Increase in tertiary	3 at 1 mark	[3]
	(ii)	Primary - not valuable usually colonial heritage – agrarian base move to secondary to become richer		
		increase demand for consumer goods new industries e.g. garments – cheap lab countries	our for export to developed	
		tertiary sector – variable – informal and for increased education	ormal	
			6 at 1 mark	[6]
(c)	(i)	Average income per head of a country Divide gross national income by total pop	ulation	[2]
	(ii)	No mark for yes or no. Credit both positive reasoned arguments e.g. not perfect indication – broad idea	ve and negative reasons. Allow	
		no indication how wealth distributed		

 (d) health care housing infrastructure life expectancy literacy energy 1 mark for each description. [5] TOTAL 25 MARKS 4 (a) (i) grown for cash/to sell [1] (ii) Sylhet, Chittagong, Comilla, etc. [1] (iii) in the east majority in NE hilly areas [3] (b) (i) 16° C to 27° C 1500 - 2500 mm rainfall alluvial, loamy soil – with humus and iron highland sloping land 4 at 1 mark [4] (ii) machinery not suitable - hilly land need to choose the leaves to be picked 2 at 1 mark [2] (c) agricultural supplies needed e.g. fertilisers, insecticides, implements, etc. raw materials for many industries e.g. jute, sugar, cotton, etc. food industries e.g. dairy products, flour mills, bakeries, etc. saves cost of importing raw materials/goods Allow development 6 at 1 mark [6] (d) (i) handlooms, pottery, bamboo, cane, silk, copper, brass, etc. 		P	age 5	i	Mark Scheme GCE O LEVEL – 2006	Syllabus 7094	Paper 2
